

From a suspicious transaction to an informed review

The model prioritizes risk; the evidence assistant prepares the case; the analyst decides.

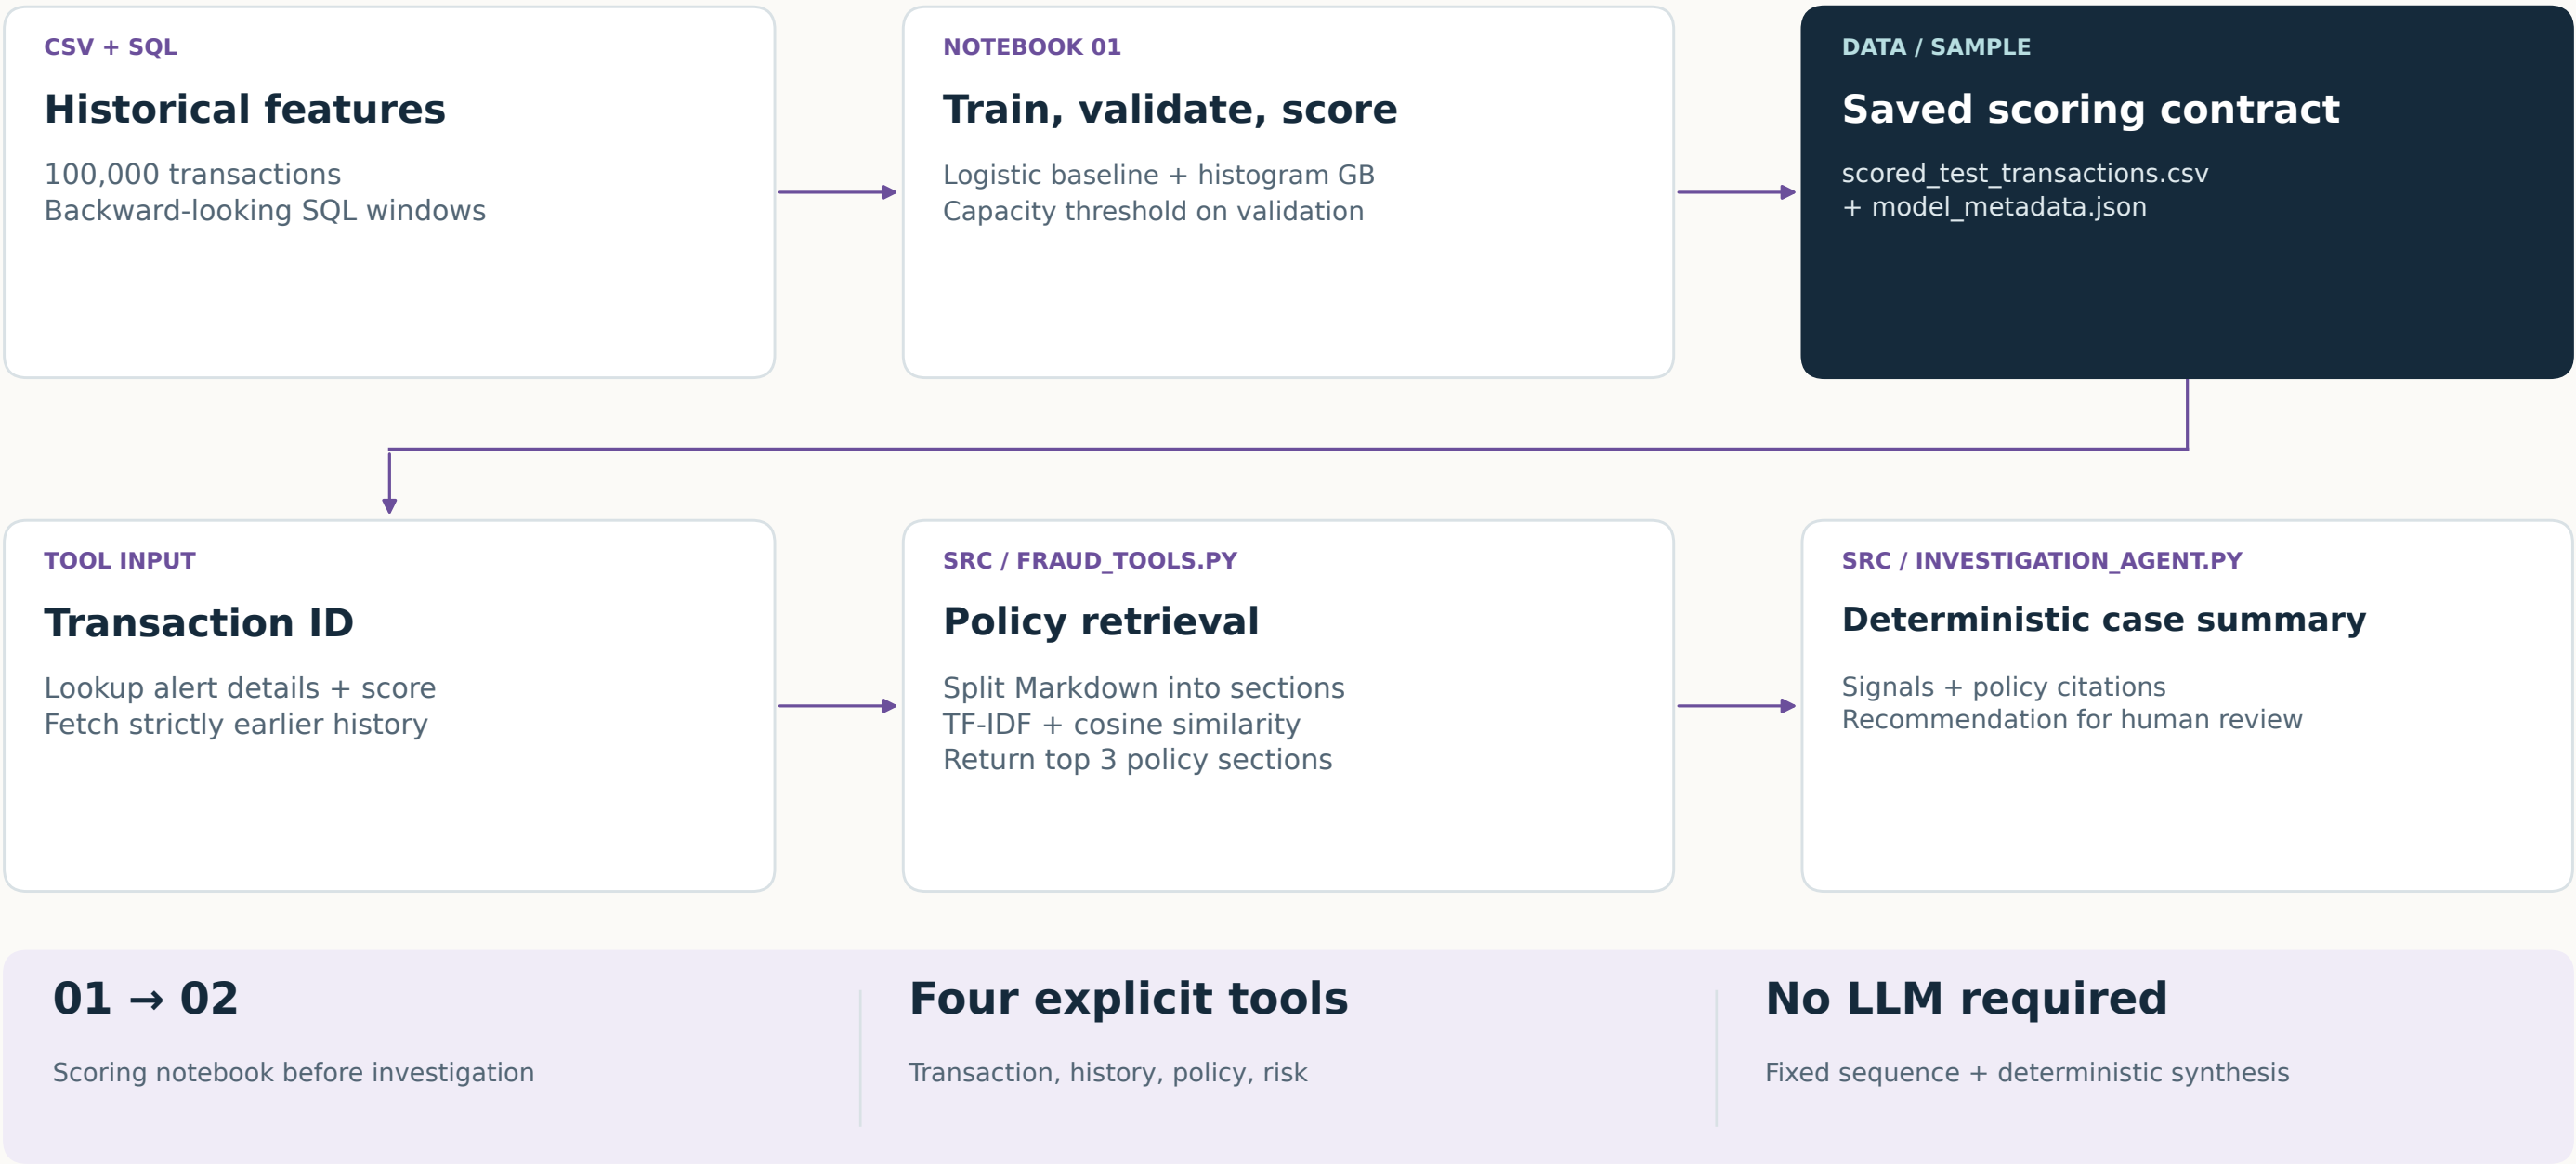

Assistant output: signals + policy citations + CLOSE / REVIEW / ESCALATE recommendation

0.584% fraud 100,000 synthetic transactions	40.1 alerts / 1,000 Future test at frozen threshold	Human authority No automatic account blocking
---	---	---

A reproducible scoring-to-investigation contract

Notebook 1 creates scored test records. Notebook 2 investigates a transaction ID using four tools.

Constrain alerts and ground every investigation

Two distinct controls: temporal risk evaluation and an auditable evidence workflow.
